

eMitter Permanent Monitoring

The Revolution in Pest Control

In case you smell a rat: eMitter Permanent Monitoring

The Revolution in Pest Control!

Several national and international hygiene standards for the food industry are now demanding the abdication of rodenticides within production facilities. Another alternative are mechanical traps. Where rodent baits are prohibited special live traps with online control are used for the so-called Permanent Monitoring-System. These revolutionary, technically up-to-date modules with self-sufficient energy harvester provide an interference-proof, intelligent sensor network.

Permanent Monitoring:

Around-the-clock-control for live traps

eMitter saves the user from having to check all traps in use manually on a daily basis, which is required by law of most countries. Instead, the bait stations are connected with the server via wireless technology. The traps in combination with the eMitter-Controller enable the Permanent Monitoring, i.e. as soon as a pest enters the trap the responsible person will be informed via e-mail or SMS. They can now directly head for the triggered trap and remove the animal.

The SWOPBOX: Environmentally-friendly, convenient, safe

The eMitter-System is completed by the new SWOPBOX that can hold most types of snap traps. The SWOPBOX can be vertically mounted to the wall which prevents it from being moved or even destroyed during cleaning works or

productive operation. It can be easily opened but is still tamper resistant. The possibility to fill it with any kind of lures and baits and the easy cleaning of the SWOPBOX are convincing features. The wall adapter facilitates an easy swapping of the box in case of strong soiling. The vertical mounting of the SWOPBOX encourages the rodents' play instinct and makes it even more attractive to them. The plastic aroma baits (NARA BLOC LURE), which can be held by the SWOPBOX offer the benefit that neither allergens nor toxic substances exist in the working environment. Therefore, the risk of importing foreign substances is reduced to zero.

World-wide deployment

The eMitter-System and the SWOPBOX are a highly efficient, energy self-sufficient and technically up-to-date as well as environmentally-friendly and are being used throughout Asia, Europe and the USA. Convince yourself of the latest technology! We will be glad to inform you personally about our offer relating the eMitter Permanent Monitoring. For more information please go to www.emitter.info

Operating mode of the eMitter Permanent Monitoring:

eMitter Basic

Your way to Permanent Monitoring

1. Trap systems

Snap trap for mice / rats

Speed Break Snap Trap

SWOPBOX with Snap Trap

2. Technology

Repeater

3. Controlling / Monitoring

Receiver with display

Features eMitter Basic

- ✓ System capacity: up to 99 traps
- ✓ Interference-proof radio technology (EnOcean)
- ✓ Simple installation
- ✓ Training by qualified staff
- ✓ Notification to the receiver with display
- ✓ Easily extendable to eMitter Comfort

eMitter Comfort

Permanent Monitoring Professional

1. Trap systems

Snap trap for mice / rats

Speed Break Snap Trap

SWOPBOX with Snap Trap

Apps for Android and iPhone

Online-Documentation

Notification via E-Mail / SMS

Features eMitter Comfort

- ✓ System capacity: any number of traps
- ✓ Interference-proof radio technology (EnOcean)
- ✓ Simple installation
- ✓ Training by qualified staff
- ✓ Complete Online-Documentation in the Data Base
- ✓ Notification via SMS or e-mail
- ✓ Easily extendable
- ✓ Fully automatic process
- ✓ Control and information
- ✓ Apps for Android and iPhone
- ✓ Easy identification by Barcode / QR-Code

6 good reasons for the use of the eMitter Permanent Monitoring:

- ✓ **Automatic control of the traps**
by 24/7 Permanent Monitoring
- ✓ **Complete Online-Documentation**
on the eMitter Data Base
- ✓ **High transparency with regards**
to intensity and nature of infestation
- ✓ **eMitter increases the efficiency**
by different trap types
- ✓ **Maintenance free system**
no battery replacement
- ✓ **Eco-friendly**
due to non-toxic methods
